Project Planning Phase

Product Backlog, Sprint Planning, Stories & Story Points

Date: 03 October 2026
Team ID: 6aba117e538da4003d63184c
Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks: 5 Marks

Product Backlog, Sprint Schedule and Estimation

The project is divided into **three sprints** covering user and role configuration, ACL implementation, script-based restrictions, and testing.

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	User & Role Management	**USN-1**	As a user, I can log in to ServiceNow so that my assigned roles and permissions can be identified.	2	High	Pranaya S
Sprint-1	User & Role Management	**USN-2**	As an administrator, I can create and manage ServiceNow users so that appropriate users can access the system.	3	High	Sajitha K
Sprint-1	User & Role Management	**USN-3**	As an administrator, I can assign roles to users so that access can be controlled according to their responsibilities.	3	High	Thenmozhi R
Sprint-1	Table & Record Management	**USN-4**	As an administrator, I can create and configure the u_institution_details table so that institution information can be stored.	3	High	Sharmila M
Sprint-1	Table & Record Management	**USN-5**	As an administrator, I can add and configure the Branch field so that records can be restricted based on branch.	2	High	Sharmila M

Sprint-2	Access Control Configuration	**USN-6**	As a user, I can view institution records only when I have the required READ permission.	3	High	Deepika P
Sprint-2	Access Control Configuration	**USN-7**	As an authorized user, I can create institution records according to my assigned permissions.	2	High	Deepika P
Sprint-2	Access Control Configuration	**USN-8**	As an authorized user, I can modify institution records only when I have WRITE permission.	2	High	Sajitha K
Sprint-2	Access Control Configuration	**USN-9**	As an authorized user, I can delete institution records only when I have DELETE permission.	2	High	Thenmozhi R
Sprint-3	Script-Based Access Restriction	**USN-10**	As an administrator, I can configure an ACL script to validate the Branch field before granting access.	3	High	Pranaya S
Sprint-3	Script-Based Access Restriction	**USN-11**	As an administrator, I can restrict unauthorized users from accessing records belonging to restricted branches.	3	High	Pranaya S, Deepika P
Sprint-3	Testing & Validation	**USN-12**	As an administrator, I can test READ, CREATE, WRITE and DELETE ACL operations using authorized and unauthorized users.	3	High	All Team Members

Total Story Points: 33

Sprint Distribution

Sprint	Story Points	Major Work
Sprint-1	**13**	Users, roles, table and Branch field configuration
Sprint-2	**11**	READ, CREATE, WRITE and DELETE ACL implementation

Sprint-3	**9**	Script-based Branch restriction and complete testing
Total	**33**	Complete ACL solution

Velocity Calculation

Velocity represents the amount of work completed by the team during a sprint.

For the planned project:

- Sprint-1 velocity = **13 story points**
- Sprint-2 velocity = **11 story points**
- Sprint-3 velocity = **9 story points**

Average Team Velocity

$$AV = \frac{\text{Total Story Points Completed}}{\text{Number of Sprints}}$$

$$AV = \frac{13 + 11 + 9}{3}$$

$$\boxed{AV = 11 \text{ story points per sprint}}$$

Since each sprint is 6 days:

$$\text{Average Daily Velocity} = \frac{11}{6}$$

$$\boxed{\approx 1.83 \text{ story points/day}}$$
